Prop Wash

By Claudia Contreras

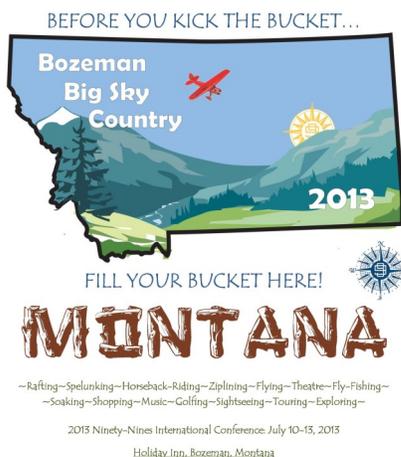

It's March and that means that it is almost spring. Spring to me means airshows did you know that there are three airshows in the area? We all know about the Watsonville fly in and the California International Airshow in Salinas. But how many of you know that Hollister also has an airshow? This year it will be held on Memorial day weekend. They will drop a police car from a helicopter. I for one want to see what happens when you drop a car live.

I think of an airshow as more than airplanes flying around, more than skilled pilots showcasing their vast amount of skills. I think of an airshow as a means to promote general aviation. I don't think most people realize how important and inspiring it is for people to go to airshows. How many of you have learned to fly or join the military because of going to an airshow? I want to thank you all of you that have provided support, financially, physically, emotionally and for all your time. I hope you will all join me this year and do what you can to keep the airshows around for many more years.

NTSB Safety Alerts
Notice Number: NOTC4586

For more info, go to FAASafety.gov

The National Transportation Safety Board (NTSB) publishes Safety Alerts for aviation, as well as other modes of transportation. Check out this site http://www.nts.gov/safety/safety_alerts.html for their list of Aviation Safety Alerts. As a bonus, there are Safety Alerts for highway vehicles and for boating!

The NTSB is an independent federal agency charged by Congress with investigating every civil aviation accident in the U.S. and significant accidents in other modes of transportation-railroad, highway, marine and pipeline.

Their Safety Alerts make interesting reading - check them out!

Pilot Tips

Climb Out Tactics

Bob: "How about as we climb out - what are some of the ways that we can demonstrate that we're a pretty classy pilot as opposed to some yahoo out, you know, running around the air patch?"

Wally: "Well, one of the things we can be looking at very closely is to make sure our wings are level. We need to check to see if our wings are level during the climb out and if we are using the proper amount of rudder to compensate for the left turning tendencies during the climb.

If we're compensating for those tendencies by holding our right wing down instead of holding in right rudder, we're slipping. And if we're slipping during the climb out, we're not climbing as efficiently as we could. We're climbing slower. So check those wings; make sure they're level. Make sure you have the proper amount of rudder in, and you'll get better performance out of the airplane.

Naturally, as we're climbing we're going to make nice gentle turns. We're going to clear in front of the airplane from time to time. But as we ease the nose down to look for traffic we want to do that nice and gently. We don't want to put our passengers on the ceiling as we do that. We want to do it so that they don't even recognize that we're doing it."

Bob: "I'm really glad you emphasized the clearing, Wally, because we're so very vulnerable with the nose of the airplane stuck up in the air, for a midair collision. It's probably not something we're consciously thinking about, but we'd better integrate it into our flying because we're going to be pretty busy at that point."

Wally: "Again, it needs to become a habit. And we still live in a see-and-be-seen environment. And if we aren't checking over that nose from time to time, we're not doing our job as airmen."

As you know Airport Management utilizes the "E-mail Alert List" to communicate directly with the Watsonville Municipal Airport pilot community.

The list current has only 130 subscribers and we believe we are not reaching many members of the KWVI pilot community, interested aviation enthusiasts and others who may want to "stay in the loop"
